MANUFACTURER OF

LAMP AND LIGHTING COMPONENTS

CATALOG NO. 18

18

METOMIC CORPORATION

CREDIT:
Our terms are net 30 days. Unless you have an established open account, we will ship C.O.D. There is always an additional fee charged for C.O.D. We accept American Express, Visa, MasterCard and Discover.

SHIPMENTS:
Unless special shipping instructions are given, our best judgment is used on all shipments. United Parcel Service is used on all orders of less than 200 lbs. in areas they service. Trucks are used on most larger shipments.

CLAIMS:
Damage or loss of items handled by United Parcel Service are to be reported to the Gearon Company immediately upon receipt of order. Please hold the merchandise in the original carton with the packing. We will file a claim with them and they will arrange a pickup and inspection. All truck shipments containing damage must be reported to the carrier by you.

RETURNING GOODS:
No merchandise is to be returned without our permission. Any errors in ordering or shipping must be reported within seven days of delivery. If ordered incorrectly, there is a 10% handling charge on all items returned.

NOTE:
Usually orders are filled and shipped the same day as they are received. If your order is not received within two weeks, please contact us. Check the invoices carefully. If items are out of stock, balance will follow only if noted on the bottom of the invoice.

SIZES FOR READY REFERENCE

Lamp Parts Sizes are sometimes confusing, so for the benefit of our customers who are not too familiar with these sizes, we are submitting the following for reference…

THREAD SIZE

M stands for Male thread and F stands for Female Thread…

1/4-27 is the size thread on top of the Harp. (Finials are usually tapped 1/4-27 but are also available in 1/8 IP).

1/8-IP is the size thread that fits into ordinary lamp sockets. (Table lamps are assembled with 1/8-IP Pipe).

1/8-IP is large hole and 1/4-27 is small hole. These sizes are often confused (particularly on Finials) because at a glance it may appear that they should be the reverse.

1/4-IP is the size thread used in floor lamps.

THREAD DATA REFERENCE

M = Male (External) thread F = Female (Internal) thread

Thread Size	Approx. Fract. Dia. (In.)	Exact Dia. (In.)	Applications
4-36	3/32	.106 .111	—Socket thread
6-32	1/8	.132 .137	—Socket thread —Small mechanical lock-up thread, commonly used on lantern assemblies.
8-32	5/32	.158 .163	—Small mechanical lock-up thread, commonly used on lantern assemblies and drawer pulls.
10-24 (Course Thread)	3/16	.184 .189	—10-24 and 10-32 are mechanical lock-up threads, used when 6-32 or 8-32 threads are not strong enough to retain assembly properly. —10-24 thread is commonly used on hooksets.
10-32 (Fine Thread)	3/16	.184 .189	

Thread Size	Approx. Fract. Dia. (In.)	Exact Dia. (In.)	Applications
1/4-20 (Course Thread)	1/4	.240 .245	—Heavy mechanical lock-up thread (no wireway), commonly used on trophy products, drawer pulls and giftware assemblies.
1/4-27 (Fine Thread)	1/4	.240 .245	—A 1/4" fine thread used on lamp finials and shade raisers.
1/8 I.P. (1/8-27 N.P.S.M.)	3/8	.380 .390	—The most common thread in the Lamp & Lighting Industry used to create tubular connections allowing electrical wire to pass through.
1/4 I.P. (1/4-18 N.P.S.M.)	1/2	.510 .515	—Thread used in heavy-duty application of 1/8 I.P. thread, where extra strength is required for stability or weight.
3/8 I.P. 3/8-18 (N.P.S.M.)	5/8	.648 .658	—Thread used for very heavy duty fixture mounts.

RITE-LOK®

Anaerobic Adhesives

ELIMINATES SELF-LOCKING NUT OR LOCK WASHER
Makes any nut a lock nut. Saves 40% - 70%. Holds securely where lockwashers fail. Does not depend on tightening torque for locking action.

Threadlocking

RITE-LOK adhesives lock all kinds of threads that are subject to transverse and axial loads against vibrational loosening.

They reduce production costs and improve reliability by eliminating lock washers and other expensive locking devices.

They preserve on-torque and distribute the load over the entire engagement length of the fastener, effectively eliminating premature material fatigue and fastener failure.

SIMICHROME POLISH

(New formula, made in Germany)
The very finest metal polish for
- BRASS
- SILVER
- COPPER
- BRONZE
- GOLD
- TIN

* PEWTER, Etc.
Contains no harmful acids to attack metals after use.

NO. 90-5072 - Large Tube Simichrome Polish

LEADED CRYSTAL
3" IMPORTED PRISM
"U" DROP

NO. 60-4584 - Clear Chrome Pin

NO. 60-4585 - Clear Brass Pin

CREDIT:
Our terms are net 30 days. Unless you have an established open account, we will ship C.O.D. There is always an additional fee charged for C.O.D. We accept American Express, Visa, MasterCard and Discover.

SHIPMENTS:
Unless special shipping instructions are given, our best judgment is used on all shipments. United Parcel Service is used on all orders of less than 200 lbs. in areas they service. Trucks are used on most larger shipments.

CLAIMS:
Damage or loss of items handled by United Parcel Service are to be reported to the Gearon Company immediately upon receipt of order. Please hold the merchandise in the original carton with the packing. We will file a claim with them and they will arrange a pickup and inspection. All truck shipments containing damage must be reported to the carrier by you.

RETURNING GOODS:
No merchandise is to be returned without our permission. Any errors in ordering or shipping must be reported within seven days of delivery. If ordered incorrectly, there is a 10% handling charge on all items returned.

NOTE:
Usually orders are filled and shipped the same day as they are received. If your order is not received within two weeks, please contact us. Check the invoices carefully. If items are out of stock, balance will follow only if noted on the bottom of the invoice.

SIZES FOR READY REFERENCE

Lamp Parts Sizes are sometimes confusing, so for the benefit of our customers who are not too familiar with these sizes, we are submitting the following for reference…

THREAD SIZE

M stands for Male thread and F stands for Female Thread…

1/4-27 is the size thread on top of the Harp. (Finials are usually tapped 1/4-27 but are also available in 1/8 IP).

1/8-IP is the size thread that fits into ordinary lamp sockets. (Table lamps are assembled with 1/8-IP Pipe).

1/8-IP is large hole and 1/4-27 is small hole. These sizes are often confused (particularly on Finials) because at a glance it may appear that they should be the reverse.

1/4-IP is the size thread used in floor lamps.

THREAD DATA REFERENCE

M = Male (External) thread F = Female (Internal) thread

Thread Size	Approx. Fract. Dia. (In.)	Exact Dia. (In.)	Applications
4-36	3/32	.106 .111	—Socket thread
6-32	1/8	.132 .137	—Socket thread —Small mechanical lock-up thread, commonly used on lantern assemblies.
8-32	5/32	.158 .163	—Small mechanical lock-up thread, commonly used on lantern assemblies and drawer pulls.
10-24 (Course Thread)	3/16	.184 .189	—10-24 and 10-32 are mechanical lock-up threads, used when 6-32 or 8-32 threads are not strong enough to retain assembly properly. —10-24 thread is commonly used on hooksets.
10-32 (Fine Thread)	3/16	.184 .189	

Thread Size	Approx. Fract. Dia. (In.)	Exact Dia. (In.)	Applications
1/4-20 (Course Thread)	1/4	.240 .245	—Heavy mechanical lock-up thread (no wireway), commonly used on trophy products, drawer pulls and giftware assemblies.
1/4-27 (Fine Thread)	1/4	.240 .245	—A 1/4" fine thread used on lamp finials and shade raisers.
1/8 I.P. (1/8-27 N.P.S.M.)	3/8	.380 .390	—The most common thread in the Lamp & Lighting Industry used to create tubular connections allowing electrical wire to pass through.
1/4 I.P. (1/4-18 N.P.S.M.)	1/2	.510 .515	—Thread used in heavy-duty application of 1/8 I.P. thread, where extra strength is required for stability or weight.
3/8 I.P. 3/8-18 (N.P.S.M.)	5/8	.648 .658	—Thread used for very heavy duty fixture mounts.

- NOTES -

Was Metomic Founded by Mistake Over 60 Years Ago?

"I've been with Metomic Corporation since 1953," says Don Lamont. "Looking back to the beginning of the company, you might say the whole thing came about as the result of a mistake! "During early 1942, my uncle Rudolph Mulac was included on a 'short list' for possible promotion to chief foreman in the automatic screw machine division of Crane Company, the international manufacturer of plumbing parts," Lamont explains. (Rudy had learned his trade working from 1919 until 1933 at Western Electric Company, a telephone manufacturer.")

"To put pressure on the administration at Crane Company, as well as to have an alternative option which might be better for him, Rudy prepared an application for the position of superintendent of the screw machine department at the Stiffel-Bradley Company," Lamont says.

"Concerned about the possibility of jeopardizing his position at Crane Company, however, he decided to think it over before putting the letter in the mailbox. "Instead, he put the letter inside his coat pocket," Lamont recalls. "Unaware of this, his sister took the coat to the cleaners and, finding the sealed, stamped envelope in the pocket, mailed the letter – a mistake that upset Rudy at the time," he adds.

"But what a fortunate mistake it turned out to be! Ted Stiffel and Dave Borowitz (Bradley), two lamp manufacturers who had combined their talents and funds to go into war work, made Rudy an offer he could not refuse," Lamont notes. "It was only after he had been on the job a short time that he found out there was hardly a screw machinery department at all! It had to be built and rebuilt from scratch with old and older machines," he explains.

"The amazing thing is that he and Ted and Dave did it — and they loved doing it! During World War II, unless you had attained some sort of priority position by manufacturing war material, you were not permitted to make civilian consumer items even if you could get some of the components," Lamont explains. "But by making hundreds of thousands of bolts for anti-aircraft guns and other essential turnings for the war machine, the Stiffel-Bradley Company was able to keep their hand in and make about 10-20 percent normal lamp production – some of which was even silver-plated!"

Although he was in high school at the time, Lamont got involved in the process. "I began to work for them part-time while I was in high school," he explains. "I was taking chemistry at the time and Ted Stiffel put me in charge of these very mysterious tests – one of which, the mercurous nitrate test, was critical. I can still feel the charged atmosphere surrounding all of the big-wigs as they breathed down my neck to determine whether or not this young kid would declare the lot of parts worth thousands of dollars as passable.

"Needless to say, we all got along fine – so much so that after V-J Day, when most government contracts were withdrawn, Ted Stiffel and Dave Borowitz told my uncle Rudy to set up the machines in a new location and to feel free to begin turning brass lamp parts for both the Stiffel Company and the Bradley Company as well as any other possible customers," Lamont says. "In August of 1945, Rudy took this new spin-off (still without a name) and located it in a building just three blocks from where he was born. This gave him a felling of familiarity in a rapidly changing world," he notes.

"That was a time, of course, when talk of 'The Bomb' was on everybody's lips, and someone said that 'atomic' meant 'power from the smallest.' Because of that, Rudy decided to call the new company 'Met-omic' meaning 'power from metal,'" Lamont explains. "The name stuck. Since uncle Rudy's initials were R.A.M., I would have preferred calling the company 'Ram Products' with a mighty mountain goat as the logo, but oh well! The name has been good to us, we have been here 60 years," he comments. "Rudy bought out Ted and Dave after three years. Although Bradley Lamp and the Stiffel Company have gone out of business, other quality manufacturers have maintained a constant liaison with Metomic through the years," he adds.

"Metomic was very much a family business from the start – with Rudy as the company's head, his sister Myrtle Lamont as the office manager, his other sister Dorothy Ottosen as the 'forelady' and his brother Eddie as the accountant for a short time," Lamont explains. "Various other family members have put in a stint, and my brother Bob added his expertise with computers after retiring from AT&T. I joined the team in 1953 and ended up as CEO! Our 'family era' only ended early in 1995, when the Palumbo family purchased Metomic."
